

Wireless Handheld Scanning

**Alvarado's PocketGate
Ticket Validation/
Lookup System**

**Symbol PPT 8846
Pocket PC**

Alvarado's PocketGate™ ticket validation/lookup application gives venues the ability to scan barcoded tickets in real-time, using a convenient, easy-to-use handheld scanning device.

The PocketGate application is specifically designed for use with our GateLink™ Validation system, and comes installed on a rugged Symbol PPT 8846 Mobile PDA.

The integrated bar code scanner in this Pocket PC based device provides high performance scanning, even in bright light.

The Symbol PPT 8846 includes a large 1/4 VGA color touch screen display, an improved rechargeable lithium-ion battery, plus fully integrated Wireless Local Area Network communication (802.11b).

Alvarado's PocketGate is an extremely flexible barcode ticket validation solution for handicapped entrances, or for venues that have entry points without turnstiles, such as performing arts facilities.

It is also the ideal complement to ticket scanning turnstiles at larger facilities, making it possible for supervisors to scan tickets in real time, or use touch screen entry to quickly look up ticket numbers.
